Welcome. Welcome to the web site for Agent-based and Individual-based Modeling: A Practical Introduction. This is a textbook on scientific applications of agent-based (or "individual-based"; we use the terms synonymously) modeling to study complex systems.

Agent-based and Individual-based Modeling: A Practical

Mathematical and theoretical biology is a branch of biology which employs theoretical analysis, mathematical models and abstractions of the living organisms to investigate the principles that govern the structure, development and behavior of the systems, as opposed to experimental biology which deals with the conduction of experiments to prove ...

Turn theory into practice by entering COMAP's Mathematical Contest in Modeling (MCM). The study of mathematics as a subject in its own right may have started with Pythagoras, but people have been counting as a basic necessity of everyday life for thousands of years.

Deterministic modeling process is presented in the context of linear programs (LP). LP models are easy to solve computationally and have a wide range of applications in diverse fields. This site provides solution algorithms and the needed sensitivity analysis since the solution to a practical problem is not complete with the mere determination ...

Compartmental models are a technique used to simplify the mathematical modelling of infectious disease. The population is divided into compartments, with the assumption that every individual in the same compartment has the same characteristics.
