Driving Storage Performance Over Ethernet Networks Switch port buffering is a critical consideration in IP based Storage networks. The deep buffer architecture of the Arista 7280R and 7500R series switches provides a platform for lossless asymmetric connections with 10G, 25G, and 50G nodes, such as storage devices and compute nodes. Combining VOQ techniques with expanded dynamic buffering ...

Leveraging existing resources, collapsed IP Storage networks provide the most cost effective alternative for deploying IP storage, but in this design, care must be taken to ensure the proper buffering is available to handle the load without causing loss among all traffic in the network. To this end, Arista 7500E spine switches and 7280SE leaf switches are prescribed as they offer the most ...
