Mouse double minute 2 homolog (MDM2) also known as E3 ubiquitin-protein ligase Mdm2 is a protein that in humans is encoded by the MDM2 gene. Mdm2 is an important negative regulator of the p53 tumor suppressor.

2. Spectrin, a major component of the membrane skeleton. Membrane skeleton, a dense proteinaceous network, is thought to be responsible for the remarkable mechanical properties of the erythrocyte membrane, which permit it to withstand and respond to very strong mechanical stresses the red cell experiences during its 120-day life-span within the ...

Aging is associated with a decline in mitochondrial function and the accumulation of abnormal mitochondria. However, the precise mechanisms by which aging promotes these mitochondrial alterations and the role of the latter in aging are still not fully understood. Mitochondrial dynamics is a key process regulating mitochondrial function and quality.

The ER is a complex, dynamic organelle whose functions include protein folding, Ca<sup>2+</sup> storage, and lipid and carbohydrate metabolism. Diverse cellular stresses, such as perturbations in Ca<sup>2+</sup> homeostasis, redox imbalance, altered protein glycosylation, or protein folding defects, cause unfolded or misfolded proteins to accumulate in the ER ...
